

FASCAT9100 Monobutyltin oxide CAS 2273-43-0

Overview:

Chinese name: Butyl stannic acid

Alias: FASCAT9100 catalyst, butyl stannic acid, CAS 2273-43-0, butyl stannic acid; butyl hydroxy tin oxide; monobutyl tin hydroxide; n-butyl tin hydroxide; Monobutyltin Oxide monobutyl tin oxide; monobutyl tin oxide; Butylstannate F4100; Monobutylstannate; Monohydroxybutyltin oxide; Monohydroxybutyltin oxide, Butylhydroxytin oxide, Monobutyltin oxide, Monobutyltin oxide, Monobutyltin hydroxide; ;Butyl acrylic acid;Monobutyltin oxide, monobutyltin oxide, monobutyltin hydroxide oxide

English name: Butylhydroxyoxo-stannane;n-Butyltin hydroxide oxide;butyl-hydroxy-oxotin;Butyltin oxide;Monobutyltin Oxide;l-Butanestannonic acid;Butylenestannonic Acid;Butylhydroxytin oxide;Butylstannoic acid;butylstannoic acid catalyst;Butylstannonic acid;Butyltin hydroxide oxide; n-butylstannoic acid;n-butylstannonic acid;Stannane, butylhydroxyoxo

丁基锡酸

butyl stannic acid

Physical and chemical properties:

CAS 2273-43-0

EC#218-880-1

Molecular formula C₄H₁₀O₂Sn

【EINECS number】 218-880-1

【Molecular formula】 C₄H₁₀O₂Sn

【MDL No.】 MFCD00013927

【Molecular weight】 192.83

【Boiling point】 350 ° C

【Density】 1,46 g/cm³

Monobutyltin oxide, also known as monobutyltin oxide, is a white powder, insoluble in water and most solvents, soluble in strong alkalis and mineral acids.

use:

Catalysts mainly used in the production of polyester resins for powder coatings
Catalyst for the synthesis of saturated polyester for powder coatings and coil coatings;
Can be used in the production of unsaturated polyesters in gel coats, sheet molding compounds and casting applications;
Catalysts can be used in the production of polymeric plasticizers.

Storage and transportation:

It should be sealed and stored in a dry, cool and ventilated warehouse.

Package:

Packing: 25Kg cardboard drum.
